New York City, New York | [LinkedIn](#) | 347-514-5547 | wjiang4318@gmail.com

Work Experience

Data Engineering & AI Associate

September 2025 – July 2026

Kubrick Group

New York, NY

- Engineered and automated a cross-platform metadata synchronization service integrating Starburst and Collibra via Python and REST APIs, eliminating ~2 hrs/week of manual reconciliation per data product.
- Developed a FastAPI data quality service running row-level validation rules with business-readable definitions, enabling self-service data governance for non-technical stakeholders.
- Partnered with banking stakeholders to translate analytics requirements into API prototypes, shipping preview endpoints and tooling driven by direct user feedback.
- Applied LLMs and prompt engineering to automate code execution and rapid prototyping workflows, cutting delivery cycles 35–40%.

Data Analyst Intern

June 2024 – August 2024

Chubb

Jersey City, NJ

- Executed exploratory data analysis (EDA) and feature engineering on 2M+ claims records across legacy source systems using Python and pandas, resolving data quality issues upstream of modeling.
- Constructed data preprocessing pipelines restructuring raw transaction logs into time-series formats to support claims-level reserve modeling and segmentation analysis.
- Prototyped k-means segmentation on payment behavior by region, severity, and claim type; findings mapped to 2–3% reserve accuracy gains across \$19B in personal lines.

Project Experience

Munch Market — Kubrick Capstone | Food Delivery Analytics

- Built a medallion-architecture ETL pipeline (bronze/silver/gold) on Databricks with Apache Spark and Delta Lake, transforming 100k+ multi-source records into partitioned, analytics-ready gold tables.
- Led stakeholder discovery in an Agile/Scrum workflow, translating epics and user stories into Power BI dashboards on restaurant KPIs and order-level retention insights for leadership.

Expense Tracker — LLM Document Extraction & Analytics Pipeline

- Architected an automated transaction classification pipeline ingesting PDF financial statements via a Groq-hosted LLM, engineering prompt logic to extract structured spend metrics across 4 accounts.
- Designed a 4-table Supabase (PostgreSQL) schema with idempotent upserts and built Next.js/Recharts dashboards to track categorized cash flow across \$5,000+ in transactions.

Education

Hamilton College - BA in Economics (Honors) and minor in Statistics (GPA 3.6)

- Honors Senior Thesis: built regression models (OLS, ordered logistic, fixed-effects) on 7,800+ GSS respondents to analyze employment satisfaction, mediation dynamics, and labor statistics.

London School of Economics - Year-Long Study Abroad in General Course (GPA: 4.0)

Skills & Certifications

Languages & Libraries: Python, SQL, PySpark, Docker, Git

AI/Machine Learning Frameworks: Tensorflow, Scikit-learn, PyTorch, LLMs, RAG

Platform & Cloud: Databricks (Delta Lake, Unity Catalog), Apache Spark, Starburst Enterprise, Microsoft Azure, Azure DevOps

Databases & BI: PostgreSQL (Supabase), Power BI, Excel, Dashboarding

Certifications: Databricks ML Associate, Starburst Deployment Expert, Alteryx Designer Core
